100W 60 hour solar panel monitoring

Overview

How much sun does a 100W solar panel get a day?

In good weather, you can expect around 300-600Wh (watt-hours) per day from a 100W panel. That translates to about 3-6 hours of “peak sun,” which varies by location and season. For example, according to data from NREL (National Renewable Energy Laboratory) and the PVWatts database on average daily sunlight hours::

How efficient is a 100W solar panel?

The efficiency of a 100W solar panel, typically ranging from 15% to 20%, plays a pivotal role in its power conversion capability.

What is a 100W solar panel?

But pay attention to this: this "100W" description is the panel's maximum rating, often measured under Standard Test Conditions (STC)—full sun (1,000W/m²), 77°F (25°C), and zero wind. *This means the panel may not actually reach a full 100W output in real-world conditions—and that's entirely normal.

Can a 100W solar panel withstand weather conditions?

For instance, EcoFlow's 100W solar panel is designed to withstand normal outdoor circumstances and has an IP68 rating. Avoid subjecting the panel to severe weather conditions, such as hail, deep snow, or extended high temperatures, to preserve its longevity.
