

FTMRS SOLAR

# 1kw-6kw inverter

## Overview

---

How much power does a 6kW string inverter generate?

This 6kW string inverter kit requires up to 345 square feet of space and generate 400 to 1,000 kilowatt hours (kWh) of alternating current (AC) power per month. Not bad when you consider that the average American household averages 920kWh per month! Actual power generated will vary based on location, equipment and installation factors.

What is a 3KW inverter?

Sale! 3kw inverter with a wall mountable lithium battery to keep lights on and family happy, entertainment and wifi guaranteed to keep going for 4hrs. The system will keep your Security lights, cctv and electric fence active for your safety. Can run kettle or microwave as well but remember its just for back up.

Is a 6 kW inverter worth it?

The combination of these two things means that it's probably not worth your while having a system at 6 kW. A 5 kW inverter will be the most cost effective. And the extra 1 kW of panels means that you'll get best use out of your inverter - it will spend more time running at its peak output.
