### How to install a solar inverter?

Secure the inverter firmly on a flat wall using manufacturer-provided brackets. Keep adequate spacing around it for air circulation and servicing. 3. Connect the Solar Panels Run DC wires from the solar panel array to the inverter's input terminals. Use MC4 connectors and proper insulation to avoid leakage or faults. 4. AC Wiring to the Home Grid.

### What size solar inverter do I Need?

For homes that mainly use basic appliances like refrigerators, computers, and TVs, a small power inverter in the range of 3-5kW is typically sufficient. Choosing the right size for your solar inverter for home ensures that you have enough power to meet your daily energy requirements without overloading the system.

### How do I connect an inverter to my home electrical system?

To integrate the inverter with your home electrical system: Turn Off the Main Power Supply: Ensure safety by cutting off the main power supply before making any connections. Connect to the AC Distribution Box: Use appropriate cables to connect the inverter to the home's AC distribution box, following the wiring diagram.

### How to choose a solar inverter?

Consider factors such as accessibility, ventilation, and proximity to your solar panels and main electrical system. The inverter can be installed either indoors or outdoors, but it should be in a place protected from direct sunlight, extreme temperatures, and moisture. Ensure the chosen site allows for easy access for maintenance and monitoring.
