

# Accounting treatment for the construction of lead-acid batteries for solar container communication stations

## Overview

---

Do solar power plants need accounting?

The IRENA's report for the year showed that solar and wind were again at the helm of new renewable capacity. Even as the sector celebrates its growth, the right accounting approach is imperative for solar power plants. Proprietors and operators of solar power plants should consider several in the accounting of their facilities.

What is a lead acid battery container?

The container is a fundamental part of the lead acid battery's construction. There are, in general, two methods of producing the active materials of the cell and attaching them to lead plates. These are known after the names of their inventors. Plante plates or formed lead acid battery plates. Faure plates or pasted lead acid battery plates.

What is a lead acid battery?

**Lead Acid Battery Definition:** A lead acid battery is defined as a rechargeable battery that uses lead and sulfuric acid to store and release electrical energy.  
**Container Construction:** The container is made from acid-resistant materials and includes features to support and separate the plates.

What materials are used to make a lead acid battery?

The glass, lead lined wood, ebonite, hard rubber or bituminous compound, ceramic materials and molded plastics are having the above mentioned properties, hence the container of lead acid battery is made of either of those materials. The container is tightly sealed with top cover.
