Alofi Uninterruptible Power Supply

Overview

What is an uninterruptible power supply (UPS) system?

Used across a wide range of applications and industries, Uninterruptible Power Supply (UPS) Systems are designed to provide a continuous source of input power despite mains failure, electrical surges and power interruptions.

How does a standby Ferro ups work?

The Standby-Ferro UPS (also known as standby ferro-resonant UPS) uses a three-winding transformer to couple the load to the power source. As shown in Figure 3, primary power flows through a normally closed transfer switch to the transformer coils, where it is coupled to the secondary coil and supplies power to the output load.

What is the primary power path in a standby UPS?

The primary power path in a standby UPS often includes LC filters to reduce electrical noise and surge protection circuitry for shielding against voltage spikes. An illustration of a standby UPS system.
