BIPV ultra-thin solar glass

Overview

The Solarvolt BIPV glass system replaces traditional façade cladding materials and enhances commercial building exteriors by providing sunshading, overhead glazing, CO2-free power generation and more. What is building integrated photovoltaic (BIPV) glass?

Building Integrated Photovoltaic (BIPV) glass is a type of solar glass designed to seamlessly integrate with architectural elements in buildings while generating electricity. It serves both as a structural component of the building and as a renewable energy source.

What is a BIPV glass system?

Doubling as a building component to enhance sustainability and energy efficiency in commercial buildings, the Solarvolt™ BIPV glass system has been honored for delivering high performance, aesthetics and CO2-free power generation while replacing conventional building materials. Complement classic building materials — or replace them.

What is the solarvolt™ BIPV glass system?

Seamlessly integrated into the building structure, the Solarvolt™ BIPV glass system unveils new possibilities for renewable power generation and glass design. Click highlighted areas to explore.

What is BIPV & how does it work?

BIPV stands for Building Integrated Photovoltaics (BIPV) and refers to a building component which has been enhanced to perform as a renewable energy generating material in addition to being an integrated part of the architecture and building façade. Examples include windows, sunshades, spandrel glass and skylights.
