# Battery Size and Energy Storage

## Overview

---

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

How big is a battery storage system?

Battery storage systems investigated ranged in size from 65 kWh/5 kW to 18MWh/3.6 MW (where the capacity of the line connecting the microgrid to the grid is 10 MW) , naturally depending on the size of the microgrid.

What are the sizing criteria for a battery energy storage system?

Battery energy storage system sizing criteria There are a range of performance indicators for determining the size of BESS, which can be used either individually or combined to optimise the system. Studies on sizing BESS in terms of optimisation criteria can be divided into three classifications: financial, technical and hybrid criteria.

Why are batteries a storage system?

Batteries as a storage system have the power capacity to charge or discharge at a fast rate, and energy capacity to absorb and release energy in the longer-term to reduce electricity costs to the consumers.
