

## **Battery cabinet does not respond after opening**

## Overview

---

What happens if a safe has a bad battery?

When the batteries begin to deplete, the safe may not respond to inputs properly, leading to failures in locking or unlocking the system. Battery issues can lead to several problems, including the safe not opening, inconsistent keypad function, or complete loss of stored codes.

How do you know if a car battery is bad?

Battery issues can lead to several problems, including the safe not opening, inconsistent keypad function, or complete loss of stored codes. Early signs of battery issues may include a faint display, a slow response time from the keypad, or beeping noises indicating low power.

What if the battery is running low?

If the battery is running low, your lock could still have enough power to light up its display keypad and make its normal beeps. You might even hear the lock click as if the lock is disengaging, only to find it still locked. Solution: This is an easy fix of just changing the battery. We do have a couple of recommendations for you, though.

How do I fix a beeping problem after a battery change?

Press and hold the program button for 5 seconds, then do the same with button A. This combination of presses should effectively resolve the beeping issue that persists after a battery change. 6. Powerbolt Specific Instructions
