

# Beijing solar Curtain Wall Project

## Overview

---

Will China's 'solar Great Wall' power Beijing by 2030?

China's Solar Megaproject: The 'Solar Great Wall' to Power Beijing by 2030! China embarks on an ambitious journey to power its capital with clean energy by constructing a massive solar farm extending through Inner Mongolia's sunny Kubuqi Desert, a project coined as the 'Solar Great Wall'.

What is China's solar Great Wall project?

China's Solar Great Wall project represents a monumental leap in renewable energy infrastructure, with a goal to produce 100 gigawatts of power—sufficient to supply the entire city of Beijing.

Why should China build a solar Great Wall?

The Solar Great Wall represents a critical component of China's strategy to transition towards renewable energy and achieve carbon neutrality. By harnessing solar power on such a large scale, China hopes to set a precedent for similar initiatives globally while addressing both energy needs and environmental concerns.

Will China build a 'solar Great Wall'?

The construction is part of China's multiyear plan to build a "solar great wall" designed to generate enough energy to power Beijing. China is now the world's biggest producer of solar power.
