What material do solar panels use?

Solar panels use conductive materials such as silicon to create chemical reactions that convert photovoltaic (PV) cells, or solar cells, into electric current. To grasp how solar and electricity work together, you must first know how solar power works to provide energy.

What if I need more energy than my solar panels produce?

If you need more energy than your solar panels produce, you will source the electricity from the grid through the meter as you normally would. Your home is connected to both sources of electricity – solar panels and the traditional grid. Your primary source of energy will be photovoltaic.
