# Can solar panels be installed on a west-facing roof

## Overview

---

Can you put solar panels on an east or west facing roof?

Yes, you can. Although south-facing roofs may be ideal, an east or west facing roof can still yield great returns. It just needs to be carefully designed around your roof layout, and your usage habits. Do I need battery storage with an east or west-facing roof?

Yes, especially if you only have solar panels on one side of the roof.

Can a west-facing roof work with solar?

However, that's not to say that other roof orientations can't work with solar. In fact, an east or west-facing roof, with the right set up, can still be highly effective – and in some cases perform BETTER than south facing panels. We can show you how to maximise your solar panel performance with an east or west-facing roof.

Which side of a roof is best for solar panels?

So, if your home or roof does not have any north-facing roof space available, but does have two sides that face east and west, you may be asking yourself which side would be a better location for the most power generation. Making the right decision will impact on how much money you can save with your solar panels.

Should you install solar panels on a south oriented roof?

Panels on roofs that face 20% east will generate 85% of those on a roof that's oriented south. You may need to install more solar panels to account for the loss in energy production if your roof doesn't face true south, but solar is still a good option even if your roof orientation is less than ideal.
