

China factory price incomer breaker Buyer

Overview

How much did China's producer price index fall in December?

According to data released Thursday by the National Bureau of Statistics (NBS), China's producer price index (PPI), which measures costs for goods at the factory gate, fell 2.3 percent year on year in December, narrowing from November's 2.5 percent decline.

What is the producer price index in China?

In China, the Producer Price Index measures the average change in price of goods and services sold by manufacturers and producers in the wholesale market during a given period. Producer Prices in China increased to 103.30 points in October from 103.20 points in September of 2025.

Are raw material and producer prices rising in China?

Both main raw material purchase prices and producer prices are subindices of China's official Manufacturing Purchasing Managers' Index (PMI). The benchmark of both indicators is 50. When the reading on both indices is above 50, it means businesses think raw material and producer prices will rise.

How much does a product cost in China?

According to the National Bureau of Statistics of China, the statistical survey of producer prices covers "prices for over 11,000 products from 1,702 subclasses, 191 groups". Statista Accounts: Access All Statistics. Starting from \$2,388 USD / Year You only have access to basic statistics.
