

# **China s price for replacing solar energy storage cabinets**

## Overview

---

As of February 2025, prices now dance between ¥9,000 for residential setups and ¥266,000+ for industrial beasts. How much does a solar panel cost in China?

According to the studies done by the International Energy Agency (IEA), more than 60% of the solar panels in the world are manufactured in China. The average cost of the solar panel in China is \$2.92/W. The average price of installation ranges from \$12,410 to \$16,790. Source: China daily Chinese companies are the world's leaders in low priced solar.

Why are solar & energy storage costs rising in Q4 2025?

Equipment procurement costs for solar and energy storage will jump around 9% starting in Q4 2025, marking the end of the bargain pricing developers have enjoyed for the last 18 months. That's because China is changing the rules. Wood Mackenzie points to three major drivers behind the coming spike: Polysilicon consolidation.

How will China's policy change affect solar projects in Q4?

That policy shift means developers worldwide will face higher costs. In the US, storage and solar projects relying on Chinese equipment will likely see about a 9% cost increase in Q4. Analysts expect inverters to lose their export rebate soon, too, adding more upward pressure.

Are solar and energy storage prices about to rise?

Solar and storage prices are about to rise after a year and a half of record lows, according to new data from Wood Mackenzie. Equipment procurement costs for solar and energy storage will jump around 9% starting in Q4 2025, marking the end of the bargain pricing developers have enjoyed for the last 18 months.
