

# **Cost of 100kWh Containerized Photovoltaic Storage in West Africa**

## Overview

---

How much does solar cost in Africa?

Stand-alone solar PV mini-grids have installed costs in Africa as low as USD 1.90 per watt for systems larger than 200 kilowatt. Solar home systems provide the annual electricity needs of off-grid households for as little as USD 56 per year, less than the average price for poor quality energy services.

How much solar PV will Africa have by 2030?

IRENA estimates that with the right enabling policies, Africa could be home to more than 70 gigawatts of solar PV capacity by 2030. The report discusses challenges in policy making and proposes a co-ordinated effort to collect data on the installed costs of solar PV in Africa, across all market segments.

Are solar home systems a good investment for Africa?

Solar home systems provide the annual electricity needs of off-grid households for as little as USD 56 per year, less than the average price for poor quality energy services. IRENA estimates that with the right enabling policies, Africa could be home to more than 70 gigawatts of solar PV capacity by 2030.

Why is Africa turning to solar photovoltaics?

Africa has abundant renewable energy resources. Traditionally reliant on hydropower, the continent is turning to solar photovoltaics (PV) to bolster energy security and support rapid economic growth in a sustainable manner.
