

# Differences between battery pack and cell modules

## Overview

---

What is the difference between battery module and battery pack?

**Battery Module:** A group of interconnected battery cells that increases voltage and capacity compared to individual cells. It includes wiring and connectors and may feature a basic battery management system (BMS) for monitoring.  
**Battery Pack:** A complete energy storage system containing one or more modules.

What is the difference between battery cell and battery pack?

**Summary:** Battery Cell: The smallest unit. Battery Module: A group of connected cells. Battery Pack: A complete system with modules and a BMS.  
**Analogy:** Battery Cell: A single brick. Battery Module: A wall made of several bricks. Battery Pack: A building made of multiple walls.

What is the difference between a battery and a module?

Each component serves a unique role: battery cells are the individual units that store energy, modules are groups of cells connected together, and packs are assemblies of modules that deliver power to the device. Here's a brief overview of these key differences. Let's break it down.

How a battery pack works?

In the battery pack, to safely and effectively manage hundreds of single battery cells, the cells are not randomly placed in the power battery shell but orderly according to modules and packages. The smallest unit is the battery cell. A group of cells can form a module. Several modules can be combined into a package.
