# Disaster Recovery Energy Storage Power Station

## Overview

---

In recent years, the damage to power distribution systems caused by the frequent occurrence of extreme disasters in the world cannot be ignored. In the face of the customer's demand for high power su.

Should energy storage be a 'must-have' for disaster recovery?

Energy storage has traditionally been viewed as an expensive "must-have" for disaster recovery efforts. While recent events support the importance of grid modernization through energy storage systems—the idea that these systems could be used to generate revenue streams and reduce operating costs is a newer concept.

How can transportable energy storage systems improve post-disaster recovery?

In summary, transportable energy storage systems can assist more reasonable distribution of energy during the post-disaster recovery of the distribution network, thereby enhancing the efficiency of the restoration process.

How can energy storage improve resilience during disaster recovery?

In the example, compared with fixed energy storage, the cost of load loss is reduced by  $0.78 \times 10^4$  \$, which can improve the resilience of the system during disaster recovery. The proposed framework effectively coordinates road repair and multi-source energy dispatch for disaster recovery.

Can mobile energy storage reduce load loss during disaster recovery?

After considering the dynamic scheduling of mobile energy storage in time and space, the load loss during disaster recovery can be significantly reduced. In the example, compared with fixed energy storage, the cost of load loss is reduced by  $0.78 \times 10^4$  \$, which can improve the resilience of the system during disaster recovery.
