# **Distributed power generation of Brunei solar container communication stations**

## Overview

---

Is distributed solar a viable alternative to public transport in Brunei?

Net Zero emissions targeted by 2050 Share of privately owned cars in Brunei's 92% transportation ecosystem with very limited uptake of public transport. Given land constraints in Brunei, distributed solar could be an effective way to increase the country's Solar PV capacity.

How is electricity used in Brunei Darussalam?

Electricity can be generated in two main ways: by harnessing the heat from burning fuels or nuclear reactions in the form of steam (thermal power) or by capturing the energy of natural forces such as the sun, wind or moving water. of total generation.

Will Brunei achieve a 30% renewable capacity target by 2035?

As per the Brunei National Climate Change Policy (BNCCP), Brunei aims to achieve a target of 30% of renewables capacity in the electricity mix by 2035, equivalent to 300MW. The majority share of the target is planned from utility-scale PV solar (250MW) and distributed solar (50MW).

Can Brunei be a solar power hub?

Brunei has floating solar potential of ~2.3 GW which presents an opportunity both for use in the electricity grid as well as for green hydrogen production. Adding 500MW of this potential to the grid would lead to increase in Solar PV penetration to 30%.

## Distributed power generation of Brunei solar container communication
