# Does 5G communication require building base stations

## Overview

---

What is a 5G base station?

As the world continues its transition into the era of 5G, the demand for faster and more reliable wireless communication is skyrocketing. Central to this transformation are 5G base stations, the backbone of the next-generation network. These base stations are pivotal in delivering the high-speed, low-latency connectivity that 5G promises.

Will China build a 5G base station next year?

[Photo by Guo Shining/For China Daily] China aims to build over 4.5 million 5G base stations next year and give more policy as well as financial support to foster industries that can define the next decade, the country's top industry regulator said on Friday.

Does 5G use more energy than 4G?

In particular, the 5G base station significantly requires more energy compared to the 4G system, especially when higher frequencies are in action. Due to the very short range of millimeter waves, several stations are required for getting complete coverage. This in turn, increases the overall energy consumption.

What frequency bands do 5G base stations use?

Utilization of Frequency Spectrum: 5g Base Stations Operate in specific Frequency Bands Allocated for 5G Communication. These bands include Sub-6 GHz Frequencies for Broader Coverage and Millimeter-Wave (Mmwave) Frequencies for Higher Data Rates.
