## Overview

---

Are battery inverters the future of solar?

They're proven performers in maximising your power generation but cannot be linked directly to batteries, meaning they're slowing falling to the side as storage has become the present and future of solar. A battery inverter converts your stored DC energy into AC for you to use in the home.

Do you need a solar inverter with a battery?

So as you can see, a solar inverter with a battery is a necessity – you can't use your stored electricity without an inverter. They are the quiet workers in the engine room. As we become more equipped and savvy in our solar management, batteries aren't a luxurious addition anymore – they're a requirement.

Does an inverter store energy like a battery?

An inverter doesn't store energy like a battery; it just converts it. You can only run your 120-volt AC devices and appliances for as long as the 12 volt DC voltage from your battery lasts. Electricity is the movement of electrons through a conductor, like a wire. This movement is called "current."

What kind of battery does an inverter need?

For an inverter, it is the battery that supports power back-up. Powerzone brings to you a range of inverter batteries to suit varying needs/applications of end users. It very well fits any brand of inverters available in the market.
