# Energy storage in the Rotterdam Industrial Park in the Netherlands

## Overview

---

Where is CO2 stored in Rotterdam?

The pipeline is now being constructed. Porthos is developing a project to transport CO2 from industrial companies in the port of Rotterdam and store it in empty gas fields under the North Sea. Thanks to Porthos, some 2.5 million tonnes of CO2 will be captured annually and stored permanently.

Does the port of Rotterdam have a sustainable future?

The Port of Rotterdam and its industrial complex had already taken steps to align their operations with the sustainability imperative that was now becoming more and more salient not only in government circles but among consumers as well.

Will Eneco and EP NL invest in a battery storage project?

The storage project will make use of the plant's existing grid connection. But while making the announcement, the two companies were vocal about costly obstacles in the Netherlands for batteries. Eneco and EP NL have announced a joint investment in a 50 MW / 200 MWh battery storage project at the Enecogen power plant in the port of Rotterdam.

How is Rotterdam advancing the energy transition?

With nearly 50 targeted measures, including significant investments in renewable energy and CO2 reduction technologies, Rotterdam is actively advancing the energy transition. Rotterdam's port is central to its sustainability ambitions.
