Overview

How much does a gas storage system cost?

Generally speaking, the cost of the gas storage tank is the most expensive part of the entire system. Operation and maintenance costs include energy consumption and equipment maintenance. The current cost of compressed air energy storage systems is between US\$500-1,000/kWh.

How much does the energy storage system cost?

The energy storage system is a 4MW, 32MWh NaS battery consisting of 80 modules, each weighing 3 600 kg. The total cost of the battery system was USD 25 million and included USD 10 million for construction of the building to house the batteries (built by Burns & McDonnell) and the new substation at Alamito Creek.

How much does a compressed air energy storage system cost?

The current cost of compressed air energy storage systems is between US\$500-1,000/kWh. Supercapacitor energy storage cost: Supercapacitor is a high-power density energy storage device, and its cost is mainly composed of hardware costs, including equipment such as capacitors and control systems.

What are storage maintenance costs?

A distinction is made between two types of storage maintenance costs: on the one hand, the costs that are directly linked to the warehouse and, on the other hand, the interest costs for the capital tied up in the inventory. Interest gains are lost here and thus do not contribute to the increase in capital.
