# European solar Combiner Box

## Overview

### What is a solar combiner box?

A PV combiner box combines multiple strings of solar panels into one main output circuit. It's essential for any solar installation with multiple strings as it provides overcurrent protection, surge protection, and circuit isolation, ensuring the safety and efficiency of your solar system. How do I know which voltage level to choose?

### What is a letop solar combiner box?

LETOP offers multiple series of solar combiner boxes, with each series specifically designed for specific installation conditions and common layouts. No matter under what conditions your solar project is used, it will become easier and more efficient. 600V DC combiner box is LETOP's economical solution designed for small PV systems.

### What is a DC combiner box?

Our DC combiner boxes offer users the possibility to integrate short-circuit and overvoltage protection, as well string monitoring solutions (I,V, T and SPD and switch isolator status), for PV systems using central inverters with PV panels in trackers and fix tilt systems.

### What is a combiner box?

A combiner box is a key DC distribution device used between PV strings and the inverter. Each string consists of solar modules wired in series, and the combiner box gathers multiple strings into a single output while ensuring safety and system efficiency. Current Collection: Consolidates DC output from 6-24 strings into busbars.
