# Foreign trade outdoor energy storage

## Overview

---

How much energy is stored in the United States?

According to Wood Mackenzie, there is 83 GWh of installed energy storage capacity in the United States, including nearly 500,000 distributed storage installations. Current forecasts show that U.S. storage capacity is expected to reach 450 GWh by 2030, falling short of the capacity required to support our nation's energy needs.

What's new in energy storage policy?

The whitepaper outlines policy recommendations to open markets for storage development, build financial support, grow a domestic storage supply chain, and progress long-duration storage technology. In addition, SEIA is releasing a new 50-state guide to energy storage policies at the state level.

Will US storage capacity reach 450 GWh by 2030?

Current forecasts show that U.S. storage capacity is expected to reach 450 GWh by 2030, falling short of the capacity required to support our nation's energy needs. The whitepaper calls on states, regional transmission organizations, and the federal government to take action to accelerate storage deployment and manufacturing. These actions include:.

What does a storage whitepaper say about energy security?

These targets are part of a new whitepaper that analyzes the economic and energy security imperative of a strong storage sector. The whitepaper outlines policy recommendations to open markets for storage development, build financial support, grow a domestic storage supply chain, and progress long-duration storage technology.
