

# **Georgetown base station was powered**

## Overview

---

Steam plant with early Curtis turbines, marking the beginning of the end of the reciprocating steam engine as the central station prime moverDoes Georgetown have a steam plant?

Even though the Georgetown Steam Plant hasn't produced electricity in more than 70 years, there's still a buzz about this place. Its biggest fan is Sam Farrazaino, President of the nonprofit Georgetown Steam Plant Community Development Authority, which signed a long-term lease to manage programming and operations of the plant.

How did the Georgetown power plant get its electricity?

By the time the plant began operating in 1907, much of the company's electricity came from hydropower, with steam generation used to increase peak-load capacity and as back-up against service interruptions. In later years the Georgetown plant remained largely idle, although it was maintained in operating condition for decades.

Why is the Georgetown Steam Plant a National Historic Landmark?

The Georgetown Steam Plant is a National Historic Landmark — a reminder of the era of electrification when industry was first attracted to Seattle by its inexpensive hydroelectric power and electric trolley car system.

How can I take a virtual tour of the Georgetown Steam Plant?

You can also take a 360-degree virtual tour of the Georgetown Steam Plant by clicking the button below. This virtual tour is presented by Seattle City Light in partnership with the Georgetown Steam Plant Community Development Authority. Take a Virtual Tour
