High quality thermal breaker in Slovenia

Overview

What is a thermal circuit breaker?

Thermal circuit breakers (circuit protectors, resettable fuses, circuit breakers for equipment protection) are ideally suited to overload protection of motors, transformers, magnetic valves, on-board electrical systems and low voltage lines.

What is the difference between kzs-1ms and NBS circuit breakers?

The KZS-1MS is one of the first electromechanical (voltage-independent) residual current circuit breakers with overcurrent protection (RCBO) on the EN/IEC market available in only one modular width. NBS is a new generation of Molded Case Circuit Breakers with rated currents between 20 and 1600A.

What are Klixon® thermal circuit breakers?

KLIXON® thermal circuit breakers are compact, lightweight, protective devices designed to repeatedly interrupt short circuits or extended overloads in applications which require precise, dependable operation plus high resistance to shock and vibration.

What is the trip time of a thermal circuit breaker?

The trip time of thermal circuit breakers depends on the height and of the duration of the overload current and the ambient temperature. With higher current ratings, the bimetal or hot wire is heated up until the defined trip time is reached and the device ensures genuine physical isolation of the contacts. It's only a circuit breaker.
