

Industrial energy storage power station construction and operation system

Overview

Does energy storage power station play a role in integration of multiple stations?

Using the two-layer optimization method and the particle swarm optimization algorithm, it is proposed that the energy storage power station play a role in the integration of multiple stations Optimal operation strategy algorithm in a complex scenario with multiple functions.

What is the operation strategy of energy storage power station?

Therefore, under the new energy situation, studying the operation strategy of energy storage power station in the power market environment is the need of the current development of energy storage technology, and it is also the urgent need of energy and power technology in the new situation .

What time does the energy storage power station operate?

During the three time periods of 03:00–08:00, 15:00–17:00, and 21:00–24:00, the loads are supplied by the renewable energy, and the excess renewable energy is stored in the FESPS or/and transferred to the other buses. Table 1. Energy storage power station.

What is the operation process of power flow regulation and shared energy storage?

The operation process of power flow regulation and shared energy storage of bus 1 after obtaining the solution to the bilevel optimization operation model is depicted in Fig. 9. During the periods of 01:00–05:00 and 23:00–24:00, the load is jointly supplied by the power flow transfer and the superior power grid.
