# Inverter DC to AC 5 kW

## Overview

---

What is the DC/AC ratio of a 5 kW inverter?

For example, a 6-kW DC array combined with a 5-kW AC rated inverter would have a DC/AC ratio of 1.2 ( $6 \text{ kW} / 5 \text{ kW} = 1.2$ ). The key driver here is the “clipping loss”: when the DC power feeding an inverter is more than the inverter can handle, the resulting power is “clipped” and lost.

Can a 5 kW solar inverter produce more than 5kW?

No, a 5 kW inverter cannot produce more than 5 kW at any moment because that is its maximum rated capacity. Even if your solar panels generate more power, the inverter will send excess energy to the grid or store it in batteries. A 5 kW solar inverter converts DC power to AC and can handle 4,000-5,000 W of load in the real world.

How does an inverter convert DC power to AC power?

An inverter converts Direct Current (DC power), usually stored in a battery, into Alternating Current (AC power). There are two methods used to achieve the power conversion. The simplest, and oldest method is a switch mode inverter using Metal Oxide Semiconductor Field Electric Transistors (MOSFET).

What is a 5kw inverter / battery charger?

The unit is an air-cooled, isolated 5kW AC-DC inverter / battery charger with multiple applications for on-board integration in a hybrid or EV infrastructure. Having totally autonomous functionality or optional control interfaces including RS485 and CAN and utilizing MODBUS, makes the integration with your control network an easy task.
