# Low temperature resistant solar container lithium battery pack

## Overview

---

What is the residual capacity of a low temperature battery pack?

The residual capacity is no less than 80% of rated capacity at 1C rate. The residual capacity is no less than 80% of rated capacity at .05C/1C rate. The residual capacity is no less than 80% of rated capacity at 1C rate. CMB has crafted hundreds of custom low temperature battery pack solutions for commercial and industrial applications.

What is a low temperature lithium phosphate battery?

RELiON's Low Temperature Series lithium iron phosphate batteries are also lightweight, no-maintenance, reliable, and worry-free, and can safely charge at temperatures down to -20°C (-4°F). Our Low Temperature Series batteries look and operate exactly like our other batteries, with the same power and performance.

What happens if you charge a lithium battery at a low temperature?

Charging and discharging standard lithium batteries at extremely low temperatures (below 0°C/32°F) can result in lithium precipitation that can ultimately lead to battery pack fires or explosions.

Does CMB offer a battery pack for cold temperatures?

CMB utilizes the latest technology when it comes to our battery packs for cold temperatures, but it's important to clarify the unique specifications of your application and its environment with our team during the design phase to ensure we can equip your low-temperature battery pack with the most ideal features for your situation.
