

# **Low voltage BMS battery protection**

## Overview

---

By implementing over current protection, the BMS safeguards the LFP low voltage battery from potential damage, ensuring that it operates within its designed limits. What is a low voltage battery management system (LV BMS)?

Low voltage batteries are the heart of many modern vehicles' electrical and software-defined subsystems, powering start up, lights, displays, safety and autonomous features. Our advanced Low Voltage Battery Management System (LV BMS) helps ensure these crucial power sources are continually optimized for performance and safety.

What is BMS battery system?

BMS battery system, commonly known as battery nanny or battery housekeeper, is mainly to intelligently manage and maintain each battery unit, prevent the battery from overcharging and over-discharging, extend the service life of the battery, and monitor the status of the battery.

What is battery protection in a BMS?

Therefore, an imperative element of battery protection in a BMS can be made by temperature protection which is facilitated by exact sensing, effective protection circuits, and proactive temperature handling techniques.

Why should you use a battery management system (BMS)?

The BMS can greatly increase the battery's life, managing its capacity, and making sure that it can provide the desired performance throughout its lifespan by avoiding overvoltage and undervoltage scenarios. When higher than the calculated electrical current is drawn from the battery, the condition of over-current arises.

## Low voltage BMS battery protection
