Myanmar's new energy storage

Overview

Myanmar, February 8, 2025 – Solis, a global leader in renewable energy, has unveiled a groundbreaking off-grid Battery Energy Storage System (BESS) in Myanmar, marking a significant advancement in sustainable energy solutions. Does Myanmar need solar power?

In conclusion, Myanmar's solar power initiative represents a critical step towards addressing the country's energy crisis. While the junta's efforts have been met with skepticism, the potential benefits of solar energy cannot be ignored.

Why is Myanmar facing a power crisis?

Myanmar's plans to expand its renewable energy sector, focusing on solar and hydropower to boost energy security and support rural development, are being hindered by severe challenges. Since the 2021 military coup, the country has faced an ongoing energy crisis, including electricity shortages, frequent blackouts, and a decline in power generation.

Why is solar power a key part of Myanmar's energy strategy?

Despite these challenges, the solar power initiative remains a crucial part of Myanmar's energy strategy. The junta has announced plans to develop 51 more solar projects, with a total capacity of 3,000 megawatts. If successful, these projects could significantly reduce the country's reliance on fossil fuels and help stabilize the energy sector.

What is the primary energy supply in Myanmar?

Approximately two-thirds of Myanmar's primary energy supply comes from biomass—firewood and charcoal—and rural areas for the most part lack electricity. The government, which took office in March 2011, has introduced sweeping political and economic reforms fundamental to development.
