

# **New Delhi Energy Storage Power Station Peak Regulation and Frequency Regulation**

## Overview

---

How do energy storage dispatch centers meet peak shaving and frequency regulation?

For the energy storage dispatch center, in order to meet the demands of peak shaving and frequency regulation in the power grid, it is necessary to allocate the grid's requirements to individual energy storage stations.

What are the different types of energy storage stations?

From a functional standpoint, the energy storage stations within the cluster can be categorized into three distinct types: frequency regulation energy storage stations, peak shaving energy storage stations, and hybrid energy storage stations capable of both peak shaving and frequency regulation functionalities.

Can energy storage capacity configuration planning be based on peak shaving and emergency frequency regulation?

It is necessary to analyze the planning problem of energy storage from multiple application scenarios, such as peak shaving and emergency frequency regulation. This article proposes an energy storage capacity configuration planning method that considers both peak shaving and emergency frequency regulation scenarios.

Should energy storage be regulated in India?

India's existing regulations present a useful framework for enabling energy storage deployment; however, current regulations that explicitly restrict storage from providing services or earning revenue for those services present a barrier to maximizing the cost-effective value of storage investments.
