Nuku alofa container BESS wholesale

Overview

What is a Bess container?

BESS containers are more than just energy storage solutions, they are integral components for efficient, reliable, and sustainable energy management. BESS containers are designed for safety and scalability. Their ability to be stacked and combined allows for customization according to project size.

How do containerized Bess systems work?

Containerized BESS systems work autonomously to ensure grid stability while promoting integration capacity of renewable energy. The BESS container solutions offer remote monitoring in full, providing real-time performance data and predictive maintenance analytics.

How long does a Bess container last?

Typically, modern BESS containers have a service life of 10-15 years in which time they will have depreciated to less than 80% of their original capacity. This service life largely depends on factors like the frequency of cycling operation, depth of discharge, working temperatures, and maintenance of the system.

What is a liquid cooled Bess container?

Our liquid-cooled BESS container utilizes proprietary thermal regulation technology to maintain cell temperature difference within $\leq 2^{\circ}\text{C}$ (refer to HJ-ESS-DESL technical white paper).
