# Oceania Solar Base Station China

## Overview

---

What is Mengxi blue ocean photovoltaic power station?

Mengxi Blue Ocean Photovoltaic Power Station, China's largest single-capacity photovoltaic power plant built on coal mining subsidence area, was connected to grid and started operation on November 5. The project is expected to generate 5.7 billion kilowatt-hours of electricity annually, sufficient to power two million households.

Will China launch a solar power station in geostationary orbit?

Long Lehao, a senior scientist at the Chinese Academy of Engineering, recently confirmed that China is working toward launching a one-kilometer-wide solar power station into geostationary orbit —a staggering 36,000 kilometers above Earth.

Will China build a space-based solar power project?

Imagine a world where clean, renewable energy is beamed from space directly to Earth. That vision is now one step closer to reality as China pushes forward with its ambitious space-based solar power project. The plan?

To build kilometer-wide solar stations in orbit, harness the sun's energy 24/7, and wirelessly transmit power to the planet.

What is China's space energy project?

This method provides continuous energy supply, unlike solar panels on Earth, which only work during the day. China's space energy project is part of its long-term strategy to become a leader in renewable energy and space technology.
