Off-grid mobile energy storage container for mining

Overview

This article explores the technical composition of a container energy storage system, examines the core technology behind container battery energy storage, and highlights the strategic advantages of containerised battery storage for ensuring operational resilience, reducing diesel dependency, and lowering emissions in isolated mining sites. How can off-grid mining improve the environment?

For off-grid mining, renewable energy and storage technologies present an ideal opportunity not only to improve the mine's environmental footprint, but also reduce energy costs while improving power quality. We are seeing a strong drive to optimise energy across mines, including solutions for e-mobility and rapid charging.

What is a mobile power station?

The MOBIPOWER is the silent solution for your remote power needs at construction job sites, off-grid camps, or other applications. Whereas, diesel generators require fuel and are noisy, this mobile power station uses solar energy with no noise pollution.

Where can a portable power container be used?

The MOBIPOWER portable power container can be used virtually anywhere on the planet and will produce and store all the power you will need.

Where is harvested energy stored?

Harvested energy is stored in Lithium LiFePO4 battery banks with its own programmed BMS (Battery Management System).
