# Portable Power Bank Installation

## Overview

---

What is a power bank?

A power bank is a portable battery pack designed to recharge electronic devices on the go. Power banks come in various sizes and capacities, typically ranging from 3,000mAh to over 50,000mAh. The capacity determines how many times a power bank can charge your device before needing to be recharged itself.

Can you build a DIY power bank with USB ports?

When building a DIY power bank with USB ports, you can go about powering the USB charge portion of the circuit one of two ways. You can either raise the voltage of a single lithium-ion cell or cell group up to 5 volts, or you can lower a higher battery pack voltage down to 5 volts.

How to build a DIY power bank?

A boost-type DIY power bank is really easy to build. All you have to do is attach the positive and negative on the board to the positive and negative on your battery. The great thing about these boards is that they include everything you need to build a DIY power bank, all you have to add is the cells and casing.

How do I use a power bank?

Using a power bank is generally straightforward, but there are some best practices to follow for optimal performance and longevity: Charge the Power Bank: Before first use, charge your power bank fully. Most power banks come with a USB cable for charging.
