# Real 100W solar light

## Overview

---

What is a 100W solar panel?

But pay attention to this: this "100W" description is the panel's maximum rating, often measured under Standard Test Conditions (STC)—full sun (1,000W/m<sup>2</sup>), 77°F (25°C), and zero wind. \*This means the panel may not actually reach a full 100W output in real-world conditions—and that's entirely normal.

How much sun does a 100W solar panel get a day?

In good weather, you can expect around 300–600Wh (watt-hours) per day from a 100W panel. That translates to about 3–6 hours of “peak sun,” which varies by location and season. For example, according to data from NREL (National Renewable Energy Laboratory) and the PVWatts database on average daily sunlight hours:.

Are 100W solar panels safe to use outside?

A: Yes, the majority of 100W solar panels are safe to use outside, particularly those with weather-resistant construction. To defend against rain, dust, and sporadic splashes, look for a panel with at least an IP65 or IP68 rating. For instance, EcoFlow's 100W solar panel is designed to withstand normal outdoor circumstances and has an IP68 rating.

Can a 100W solar panel charge a power station?

A 100W solar panel can handle small to mid-sized electronics. Here's a rough breakdown of common use cases based on a full day's charge: These exceed the continuous output capacity of a 100W panel and require larger systems with inverter and battery storage. How Long Does a 100W Solar Panel Take to Charge a Power Station?
