

## **Rooftop soft solar panels**

## Overview

What is a rooftop solar photovoltaic system?

A rooftop solar photovoltaic (PV) system uses solar panels mounted on the roof of a building to convert sunlight into electricity. Rooftop solar systems rely on the photovoltaic effect, where cells generate electricity in response to sunlight.

Is your roof fit for a solar panel system?

Not every roof is fit to host a solar panel system. A flat angle or partially shaded, inadequate space – in such scenarios, efficiency becomes poor. Hence, it requires proper analysis before final installation from an experienced solar installer by conducting site inspections, and rooftop evaluation for efficient production.

What are the different types of rooftop solar PV systems?

The three main types of rooftop solar PV systems are off-grid rooftop solar systems, on-grid rooftop solar systems and hybrid solar systems (grid-tied with battery). Off-grid rooftop solar systems include a solar battery to store excess energy, so owners have backup power during periods of low sun.

Are rooftop solar systems high maintenance?

No, rooftop solar systems are not high maintenance because they only need to be cleaned twice a year. Most debris on roof-mounted solar panels slides off naturally or is washed off by rainfall. Is it worth it to install Rooftop Solar PV Systems?
