## Overview

---

Why are China's Solar Exports reducing?

As more markets continue to adopt local content requirements (LCRs), China will start to face increasing constraints for solar exports. In response to growing LCRs, Chinese players are globalising manufacturing capacity to offset a loss in exports. Energy storage investors expand overseas footprint.

Does China's solar industry have a global reach?

In 2023, China achieved record photovoltaic export volume growth across all subcomponents, driving manufacturing expansion in emerging markets. Following Wood Mackenzie's recent presentation at the SNEC Solar PV Conference & Exhibition in Shanghai in June, we share our insights on the global reach of China's solar and storage industry.

How did China achieve record photovoltaic export volume growth in 2023?

02 Jul 2024 by ewind. In 2023, China achieved record photovoltaic export volume growth across all subcomponents, driving manufacturing expansion in emerging markets.

Should China be worried about oversupply in the energy storage sector?

Indeed, most overseas production capacity has been allocated to electric vehicles (EVs), limiting the local supply flowing into the energy storage sector, thus leaving a huge opportunity for China's exports. Nevertheless, Chinese manufacturers should be cautious of persistent oversupply in the energy storage segment.
