

# Rooftop solar panel configuration

## Overview

---

Is your roof fit for a solar panel system?

Not every roof is fit to host a solar panel system. A flat angle or partially shaded, inadequate space - in such scenarios, efficiency becomes poor. Hence, it requires proper analysis before final installation from an experienced solar installer by conducting site inspections, and rooftop evaluation for efficient production.

How does a rooftop solar PV system work?

Converts solar energy into electricity. This can be used to meet the building's own energy consumption requirements or, in certain situations, fed back into the electrical grid. Rooftop solar PV systems are distributed electricity generation options, which help to meet a building's energy needs, or provide electricity within.

Should you install a rooftop solar system for your home?

It not only helps homeowners reduce their electricity costs but also makes available an Eco-friendly energy source for their homes. If you're considering installing a Rooftop Solar System For your Home, this step-by-step guide will help you understand the process.

Can solar panels be installed on a sloped roof?

As well, solar panel installations on sloped roofs can act to trap snow that otherwise may have been considered to slide off the roof structure. Finally, roofing systems installed in new buildings are typically designed to outlast or at least match the average life of the new solar PV system which is about 25 years.
