

# **Singapore Mobile Energy Storage Project**

## Overview

---

What is Singapore's biggest battery storage project?

Singapore has surpassed its 2025 energy storage deployment target three years early, with the official opening of the biggest battery storage project in Southeast Asia. The opening was hosted by the 200MW/285MWh battery energy storage system (BESS) project's developer Sembcorp, together with Singapore's Energy Market Authority (EMA).

Why is energy storage important in Singapore?

Puah Kok Keong, Chief Executive, EMA said, "As Singapore expands solar deployment, energy storage systems will become more important to enhance grid resilience and ensure power system stability. I welcome the development of energy storage systems that are safe, cost-effective and space-efficient."

Can Singapore develop a battery energy storage system?

According to industry sources, developing a battery energy storage system in Singapore is challenging because of its dense population, lack of space for deploying energy storage systems in urban areas and corresponding fire safety and urban planning regulations.

Will Singapore have a 200mwh battery energy storage system by 2025?

By deploying this battery energy storage project, Singapore Energy Market Authority (EMA) has achieved and exceeded the country's goal of deploying a 200MWh energy storage system by 2025. This is the second grid-scale battery energy storage project after Wasilan Company deployed the 2.4MWh battery energy storage project in Singapore.
