Small power base station construction plan

Overview

How are power station foundations constructed?

The construction of the power station foundations is carried out in accordance with a detailed programme drawn up to provide the various foundations and general site works, in the sequence necessary to enable the building work and plant installation to proceed in accordance with the overall construction programme.

What is a pumped storage power station installation project?

In addition, the installation of power station units such as pump turbine, generator motor, inlet ball valve and auxiliary equipment is the core project of the entire installation project, which has a very important role and significance for the construction quality of the entire pumped storage power station.

How pumped power station control energy storage and discharge?

The medium and small pumped storage power station can control energy storage and discharge by adjusting the difference of water level in the reservoir. Therefore, the optimized control scheme is of great significance to improve the energy storage efficiency of the power station.

Should pumped storage power stations be planned according to local conditions?

In 2021, the National Energy Administration made it clear in the Medium and Long Term Development Plan for Pumped Storage (2021–2035) that the construction of small and medium-sized pumped storage power stations should be planned according to local conditions in provinces with better resources.
