Overview

What is photovoltaic smart glass?

Photovoltaic glass, also known as solar glass or transparent solar panels, is a type of smart glass that uses embedded photovoltaic cells to convert sunlight into electricity to generate electricity.

What is Solar Photovoltaic Glass?

This article explores the classification and applications of solar photovoltaic glass. Photovoltaic glass substrates used in solar cells typically include ultra-thin glass, surface-coated glass, and low-iron (extra-clear) glass.

Why is solar glass a good choice?

Glass is a durable, highly transparent material making it an obvious choice for solar energy applications. Our extra clear solar glass offers superior solar energy transmittance and is stable under solar radiation. It also survives harsh environmental conditions and protects the sensitive components of solar modules from water and humidity ingress.

What are solar glass products?

Available with added functionalities, such as transparent conductive coatings or anti-reflective coatings, our solar glass products not only offer durable transparent protection to solar panels, but also become a functional component of solar modules.
