## Solar 550 watts

## Overview

---

A 550W solar panel generates 1.8-2.5kWh daily (4.5 peak sun hours), varying by location tilt (20°-35° optimal), with 85% system efficiency accounting for inverter losses, shading, and temperature derating above 25°C (0.5% power drop per °C). What is a 550 watt solar panel?

Renogy's 550 watt solar panels are engineered with high-efficiency PERC (Passivated Emitter and Rear Contact) cells, resulting in higher performance than most conventional panels. These panels have a conversion efficiency of 22.8% and provide more output per surface area. [High-Powered Module] The 2×550W solar panels are made with these advanced cells.

Can 550 watt solar panels be used for commercial projects?

You can use a set of 550 watt solar panels to build your own commercial PV project of a medium to large scope. While the 550-watt solar panel price tends to be higher than that of lower-wattage options, fewer panels are needed to achieve the same power output. This can offset the higher cost per panel and lead to overall cost savings.

Do 550 watt solar panels reduce energy consumption?

Homes with high energy consumption due to large families or high energy demands can benefit from the increased power output of 550-watt panels, as they can help offset a significant portion of the household's energy consumption.

What is a 550W Solar System?

Their 550W models showcase the company's DeepBlue 3.0 technology, offering efficiency ratings exceeding 21% while maintaining competitive pricing that makes solar accessible to more property owners. JA Solar offers two distinct 550W models, each engineered for specific applications and performance requirements.
