# Solar air conditioner introduction where to buy

## Overview

---

What is a solar air conditioner?

Solar air conditioners are solar-powered air conditioners designed to efficiently and effectively provide cooling to a room. Solar air conditioners use solar panels to power the air conditioner, and solar hotspot energy gives much power to the air conditioner's condenser and refrigerant.

How much does a solar AC cost?

We found that the investment in a solar AC generally pays for itself within 10 years of purchase. Angi reports the average homeowner spends \$3,400 on a solar air conditioner. In general, they cost \$1,600-13,000. Mini splits are more affordable, while solar-powered central air conditioners cost more.

How do solar-powered AC units work?

Here's how these types of currents work in solar-powered AC units: DC solar air conditioners: Direct current solar air conditioners use the DC power that is produced by photovoltaic panels. Because these systems don't require an inverter to change the power to alternating current, they're optimal for off-grid applications.

Can a solar inverter run an air conditioner?

A solar inverter is required to convert direct current (DC) energy from solar panels into usable home solar electricity to operate an air conditioner with solar power. Connecting the solar thermal panel to the air conditioner's condenser unit allows the sun's power to drive the refrigerant in the AC unit.

## Solar air conditioner introduction where to buy
