

# **Solar container communication station inverter grid connection and station start-up process**

## Overview

---

Can a containerized Solar System be installed off-grid?

Off-Grid Installer have the answer with a containerized solar system from 3 kw up wards. Systems are fitted in new fully fitted containers either 20 or 40 foot depending on the size required.

How many volts can a PV inverter run?

The state-of-the-art inverters can be operated at DC input voltages of up to 1,500 volts. The transformer, specially optimized for operation with PV inverters, ensures reliable and efficient connection to the medium-voltage grid.

How long does it take a PV inverter to reconnect?

The limitation is set at 180 seconds and 400V, which means the maximum reconnecting time is 180 seconds and inverter would start to connect to the grid whenever the PV input voltage reaches 400V.

What is an off grid solar container unit?

Attaching to the grid can also be expensive and this can be an issue in the UK as well as Africa or Latin America. An Off Grid solar Container unit can be used in a host of applications including agriculture, mining, tourism, remote islands, widespread lighting, telecoms and rural medical centres.
