# **Solar panel with solar cell combination**

## Overview

---

What are the different types of solar panels?

Half-Cut Cell Layout: Reduces resistance and increases efficiency, often used with monocrystalline and PERC cells. Bifacial Solar Panels: Capture sunlight from both sides, typically paired with N-type cells (TOPCon, HJT) to maximise efficiency. Shingled Cell Layout: Higher efficiency and power density, often used with HJT or monocrystalline cells.

Can a tandem solar cell combines silicon and perovskite?

In the new *Nature* paper, a team of researchers at LONGi has reported a new tandem solar cell that combines silicon and perovskite materials. Thanks to their improved sunlight harvesting, the new perovskite-silicon tandem has achieved a world record 33.89 percent efficiency.

How efficient are solar panels?

Average panel efficiency has increased considerably over recent years from around 16% to well above 22% as manufacturers incorporate the latest cell technologies and innovations. At present, the world's most efficient solar panels are manufactured using HJT and IBC N-type monocrystalline silicon cells and achieve efficiency levels above 23.5%.

How does a hybrid solar system work?

1. Photovoltaic Component: The PV cells in the hybrid system work like any standard solar panel, converting sunlight directly into electricity. This electricity can be used to power homes, businesses, or other facilities, reducing reliance on grid power.
