## Overview

---

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels.

How do solar panels generate electricity?

This is where electricity generated by the panel flows into an electrical system of a home or a power grid. Now that you understand how solar panels are constructed, let's dive into how they generate electricity. There are two primary ways in which solar panels generate electricity: thermal conversion and photovoltaic effect.

What are the different types of solar energy?

Learn about the basics of solar radiation. There are two main types of solar energy technologies—photovoltaics (PV) and concentrating solar-thermal power (CSP). You're likely most familiar with PV, which is utilized in solar panels. When the sun shines onto a solar panel, energy from the sunlight is absorbed by the PV cells in the panel.
