# Solar panels collapsed

## Overview

---

What happened to solar panels in 2024?

Worldwide, 2024 was a difficult year for the residential solar market. After several years of 30 percent annual growth in installations, 2024 saw a decline: fewer panels were installed in many markets, and companies' valuations declined. This led to large capital injections, major bankruptcies, and job losses.

Is the US residential solar industry on the brink of collapse?

From pv magazine USA The US residential solar industry may now be on the brink of collapse. Facing macroeconomic challenges and shifting state and federal policies, an industry once defined by double-digit growth in installations is now experiencing steep declines – and the latest draft of the One Big Beautiful Bill Act makes conditions even worse.

What happened to the solar market after the 'crash'?

Much has been made of the “crash” in the global residential solar market, and although the fall hurt, there was solid ground to land on. Many markets, including most US states, France, and the United Kingdom, have continued to grow, albeit at a slower pace than before (Exhibit 3).

How has the residential solar market changed in 2024?

Declines in residential solar markets have been a hit to the industry—but its foundation is strong. Worldwide, 2024 was a difficult year for the residential solar market. After several years of 30 percent annual growth in installations, 2024 saw a decline: fewer panels were installed in many markets, and companies' valuations declined.
