

# Solar panels power grid

## Overview

---

Learn the basics of how solar energy technologies integrate with electrical grid systems through these resources from the DOE Solar Energy Office.

What is a grid tied solar panel system?

When grid-tied, your solar panel system is connected to the grid via a bi-directional electricity meter. It measures the excess power you send to the grid when your solar panels produce more than you need, and the amount of energy you pull from the grid when your solar panel system doesn't generate enough.

What is a grid connected solar system?

Components and Prices Explained A solar system connected to the utility grid through a bi-directional net meter is known as a grid-connected PV system. It is known by various names, including a grid-connected energy system, a grid-tied solar system, and an on-grid solar system.

What is a grid-tied solar system?

On a grid-tied system, homeowners with rooftop solar panels generate the electricity they need, feed the surplus to the grid, and only turn to the grid when their systems aren't generating enough to meet their needs.

Can a solar PV system work without a grid?

It should be clear by now that without a grid, a grid-connected solar PV system can't be operational. A grid is indeed the most quintessential part of a grid-connected system. It's more akin to a battery, as that's where excess power is stored and then retrieved when needed. So, it's essentially a backup power source.
