## Solar panels towards that side

## Overview

---

The optimal direction for solar panels to face is generally south in the Northern Hemisphere, as this orientation maximizes sunlight capture throughout the day, potentially increasing energy generation by up to 20%. Which direction should solar panels face?

Solar panels, however, need to face solar or geographic south, which is the direction towards the South Pole. By the same reasoning, if the solar panel is located in the southern hemisphere, the panel should instead face in the direction of true north.

What is solar panel orientation?

Solar panel orientation refers to the compass direction that solar panels face when installed. This positioning determines which cardinal direction – north, south, east, or west – the panel surface points toward during operation. The orientation choice directly affects how much direct sunlight panels receive throughout the day.

Why do solar panels face and tilt angle work together?

The direction panels face and their tilt angle work together to maximize energy production from available sunlight. Solar panel orientation refers to the compass direction that solar panels face when installed. This positioning determines which cardinal direction – north, south, east, or west – the panel surface points toward during operation.

Can solar panels be placed in multiple directions?

**Combining Directions:** Panels can be placed in multiple directions other than just an east/west split. For example, some solar panels could be placed facing north and some facing west. This will result in an output similar to north-west facing panels. But you're not limited to just two directions.

## Solar panels towards that side

---

What To Consider When Deciding the Direction Your Solar Panels ...

The direction that solar panels face has a significant impact on the production and savings that homeowners see. The general guidance is to have panels facing toward the south, but that is ...

---

What Side of House is Best for Solar Panels ...

Apr 29, 2023 · In the Northern Hemisphere, the south side of a house is the best location for solar panels, because it is the side that receives the most ...
